

XRGO

powered by SRI

Telemanipulation software for industrial robot arms

→ Designed to provide high dexterity teleop performance

- Increase operator safety through remote operation
- Pharmaceutical manufacturing
- Biological research
- Energy sector
- Explosive ordinance disposal

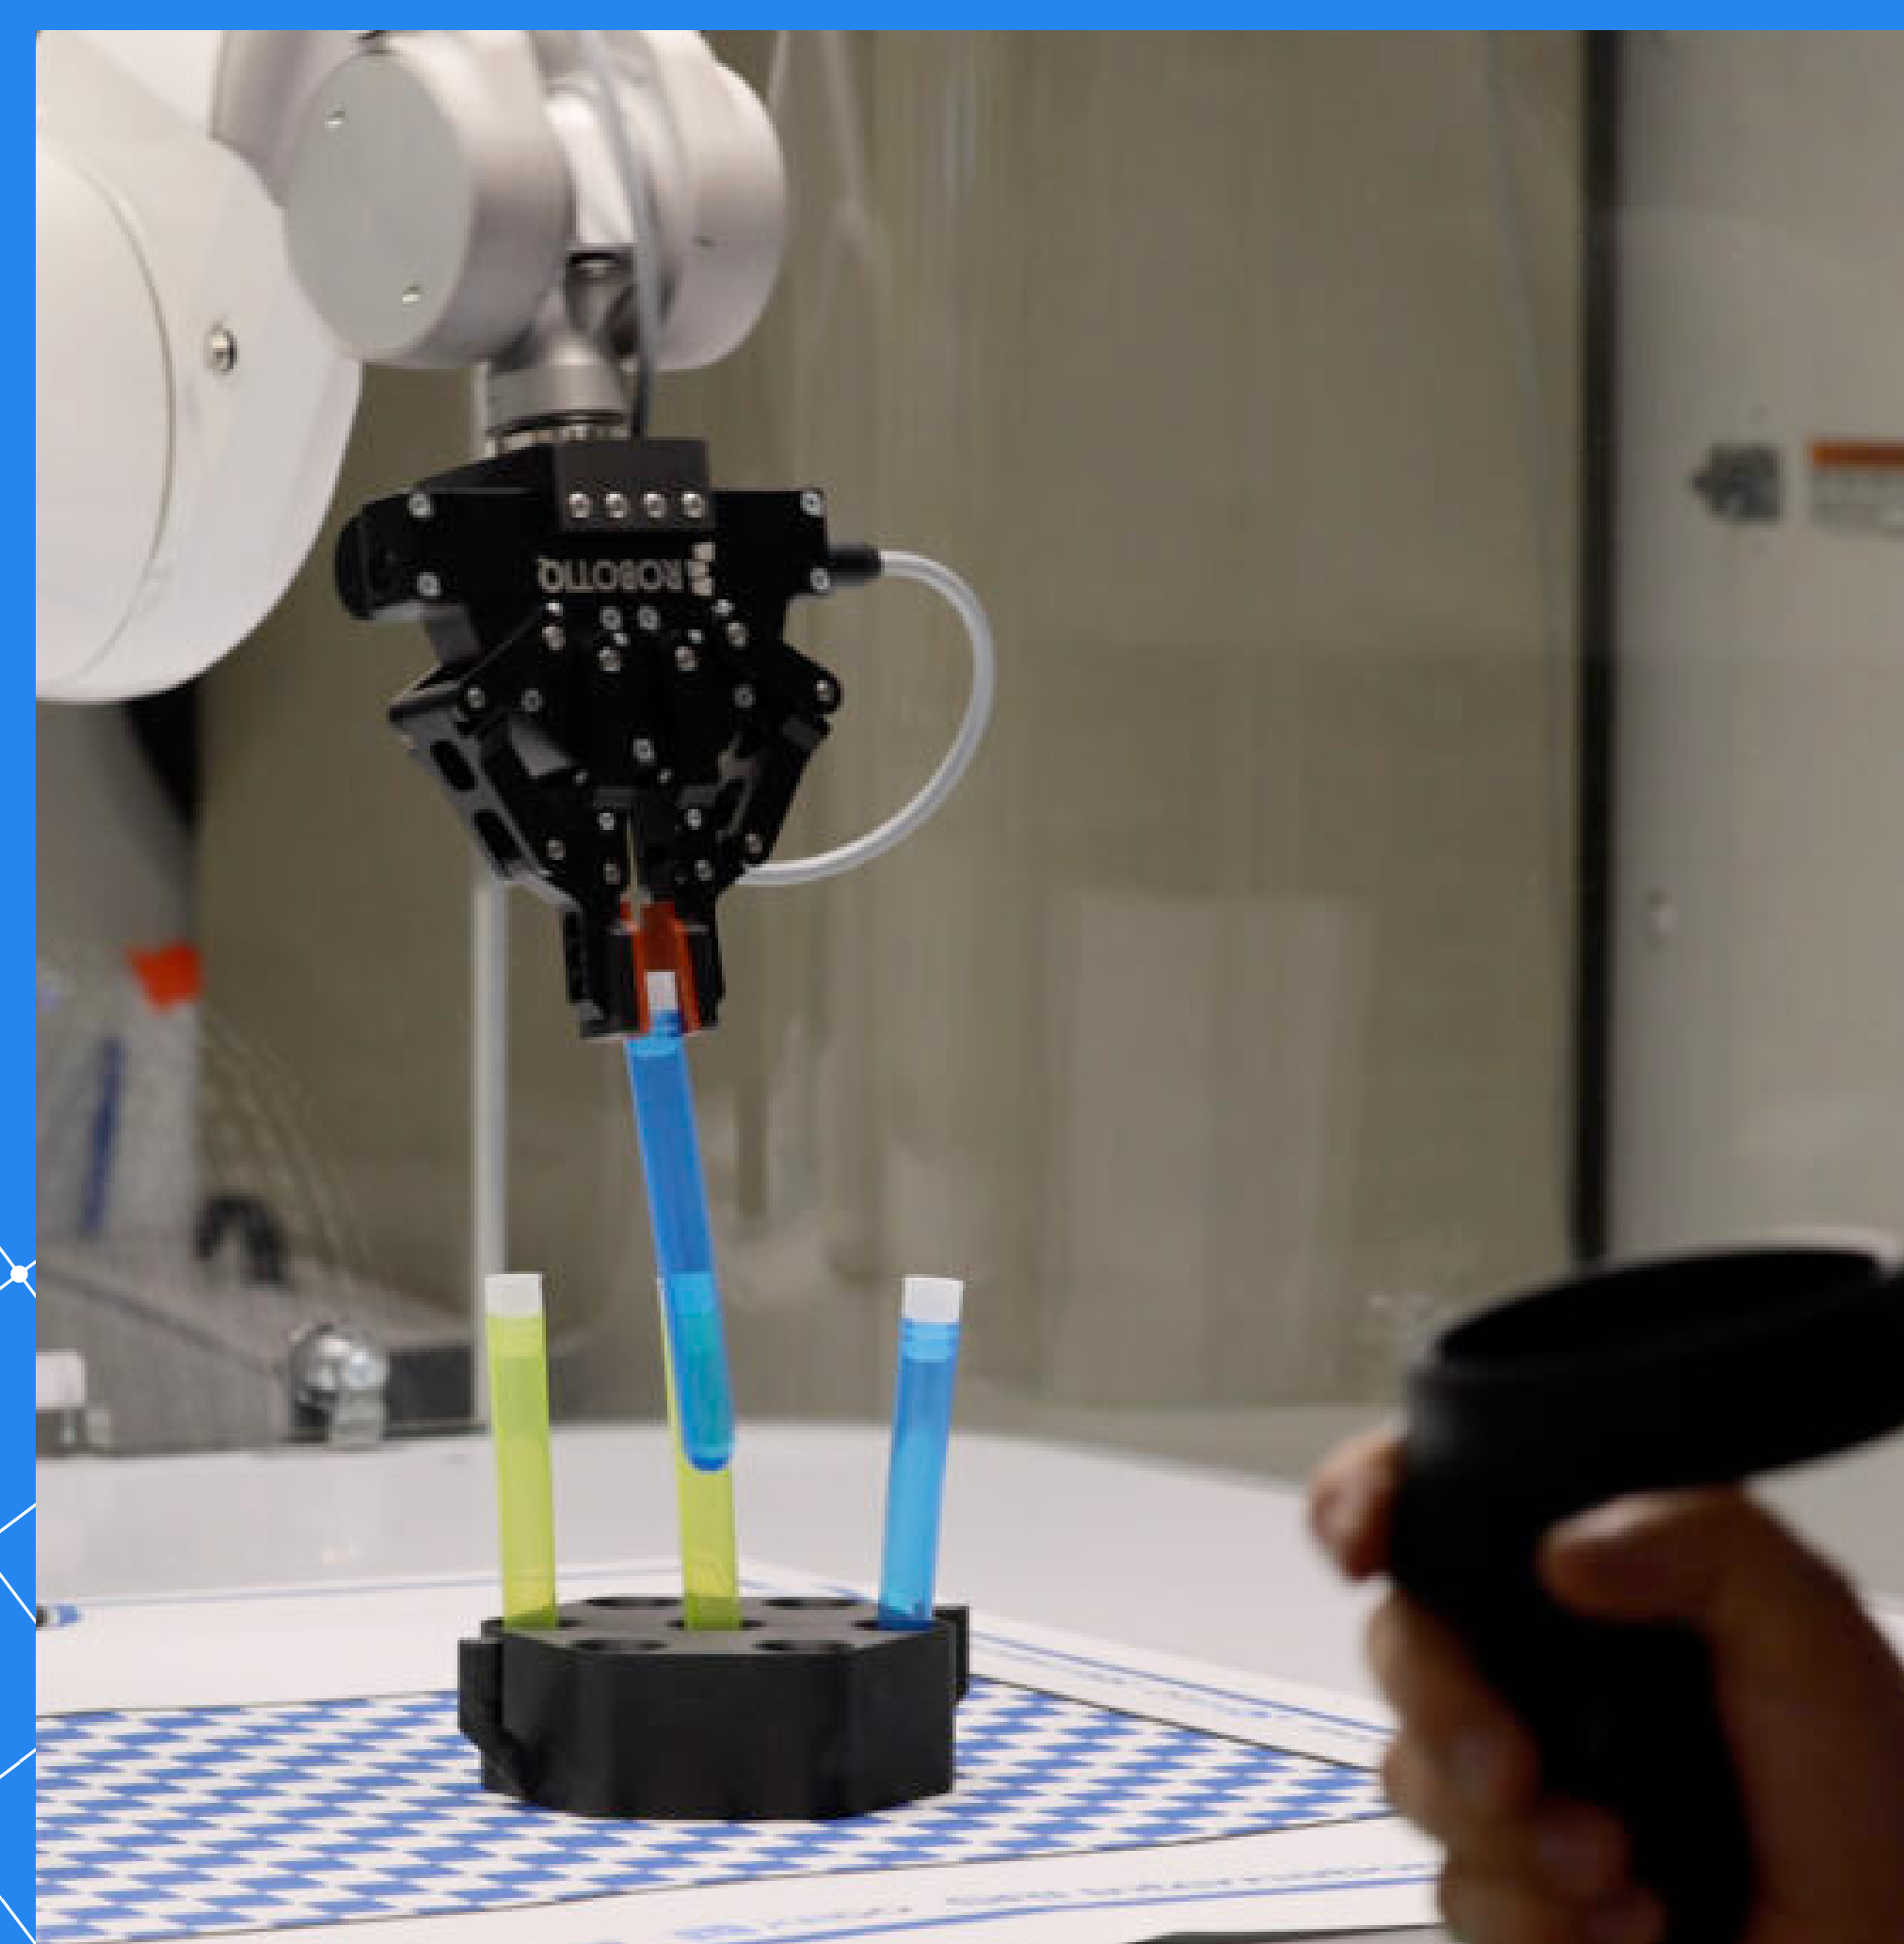

→ Immersive 3D viewing virtually transports user to the task

→ Intuitive VR-based interface enables remote manipulation of complex tasks

→ Data recording

→ Video as well as actual positioning

→ Software designed to be used with 3rd party robot arms
