University of Pittsburgh School of Pharmacy

## Background

- Exposing students to pharmacy early on can spark an interest in science, healthcare, and helping others
- While many programs have focused on high school students, little has been done to focus on the middle school space

# Objective

 To evaluate the feasibility and impact of a pilot middle school focused pharmacy educational program on student understanding and perception of the profession of pharmacy

## Methods

- This study was an evaluation of student perception and opinion of the pilot program. The University of Pittsburgh's IRB classified this program as exempt
- Sessions included:
  - Compounding lab
  - High fidelity human case simulation
  - Molecule docking simulation
  - Tour of the school and wet lab
  - Virtual problem-based learning scenario

Figure 1: Compounding lab

Figure 2: Student attendees

Figure 3: High fidelity human case simulation

#### Methods

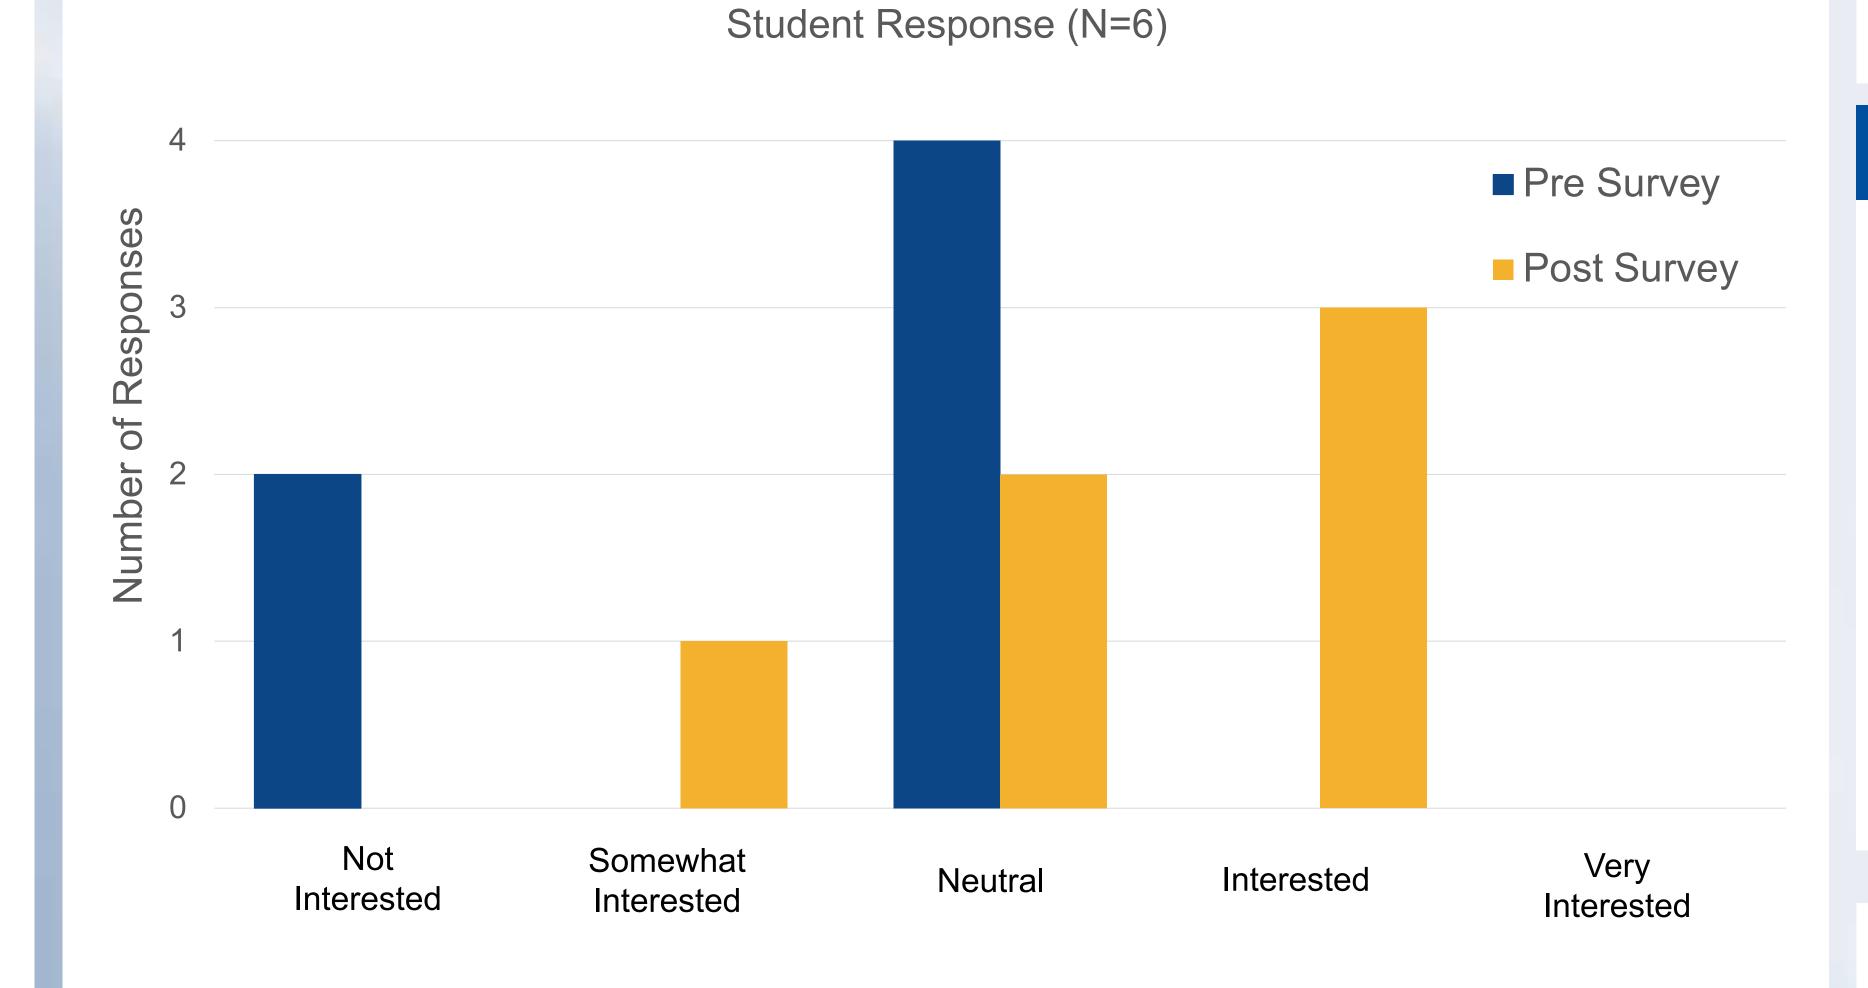

- A pre and post survey were given to all students
  - 1<sup>st</sup> survey focus: knowledge of a pharmacist's education and career opportunities
  - 2<sup>nd</sup> survey focus: evaluation of the activities
- Descriptive statistics and Wilcoxon signed rank tests were used

### Results

7 students attended and only 6 filled out the surveys

Table 1: Student Demographics		N=7
	Age: (median; range)	13;11-14
	Sex: % male	57
	Ethnicity: % Caucasian	100
	Grade: (median; range)	8; 6-9

Figure 4: Student's interest in becoming a pharmacist

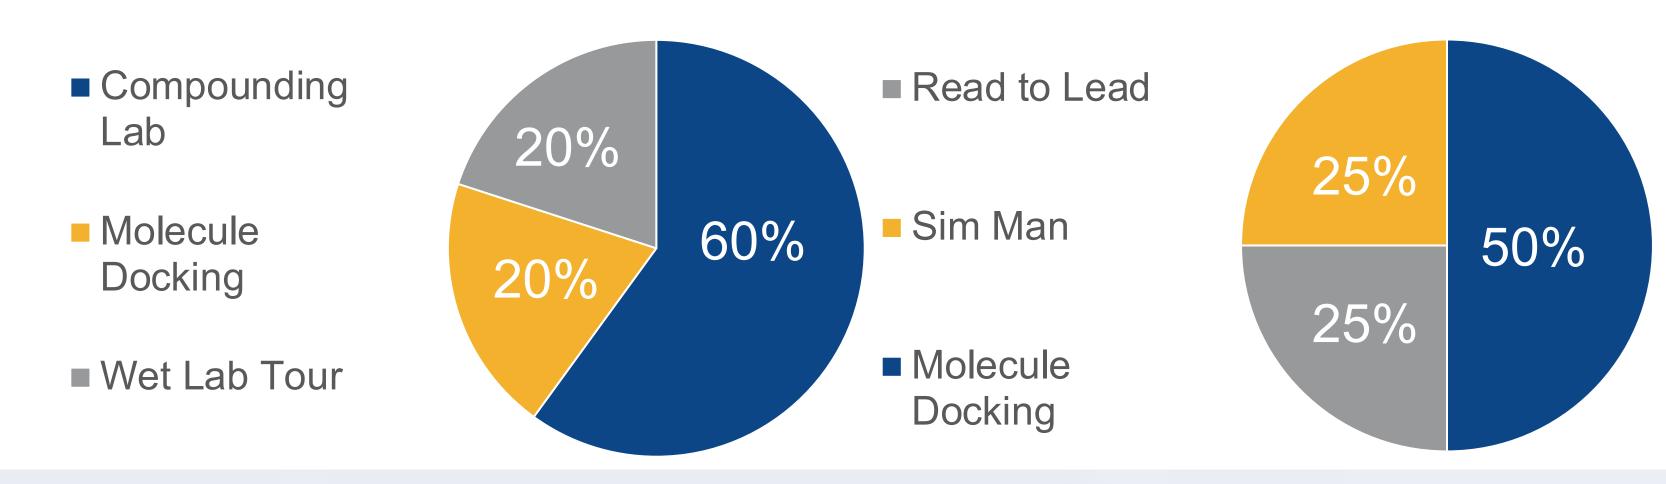

#### Results

Table 2: On a scale of 1-5, what is your understanding of what a pharmacist does? (1 = no understanding, 5 = great understanding) (N=6)

Figure 5: Student's most and least favorite activities

#### Most Favorite Activity (N=5) Least Favorite Activity (N=4)

### Conclusions

 Results show that early immersion into the profession of pharmacy is of interest to middle school students and a larger program should be conducted

#### Next Steps:

- One limitation to the program is the lack of diversity. Our school is passionate about equal representation and in a larger program we would recruit from underrepresented areas
- Tailor the activities to what we found to be most beneficial in helping the students learn the pharmacist's role
